

PREVENTIVE MAINTENANCE

The CHAMPS Preventive Maintenance application module stores and controls a library of tasks used to maintain company assets such as equipment, buildings, locations, etc. PMs (preventive maintenance tasks) are comprised of planned tasks and associated procedure and safety instructions, labor and material requirements, etc., that are to be performed or consumed on demand or on a specified frequency.

Once established, a PM is capable of generating corresponding Work Orders that will be used to execute the steps, procedures, use of labor and materials, etc. that are specified in the PM task. The CHAMPS

Preventive Maintenance Module is integrated with other core modules, which together make up the CHAMPS EAM system.

FEATURES & FUNCTIONS:

- Creation of a library of unlimited tasks with virtually unlimited task procedures.
- A means of identifying tasks overdue for tasking.
- Generation of task due calendar and duty cycle tasks into Work Orders.
- Material and labor requirements forecasting.
- Definition of multiple meters/ triggers/frequencies for a particular PM task.
- Access to Equipment Calibration data.
- Automated reservation and assignment of required labor, parts/ material, permits, etc.
- Review and approve performance requirements and standards.
- Maintain work package for future use.
- Complete user-defined meter development capability.
- Ability to put PM's in an inactive status for a predetermined period.
