

CHAMPS EAM Windows Update

A functional review of features added to CHAMPS EAM
Windows since our last User Group Meeting

V12.02 to V13 Update Summary

Module	Object	Description
Admin	User Setup	Merged the two User Setup windows into a single window that allows all of the User Setup to be performed at once.
Admin	Attachment Setup	Merged the setup required for Attachment processing to be merged into a single window rather than having a Maintenance Attachment setup and a Financial Attachment setup window.
Admin	In Tray Document Approval	Allow WO/Step documents to be approved from all Maintenance Locations without having to change the User's Current Location.
Admin	Alerts	Allow Alerts to be Substituted to other Users.
User	Favorites & Recent Edited Records	Provide a method to save Favorite records, make comments about these records, and share them with other users. Also use this feature to retain the last 100 recent records edited. Provide a method of managing Work Orders and Steps Assigned To a User without having to use the WO or Step Browsers.
Inventory	Issues and Receipts	Update Inventory Last Issue Date, Last Receipt Date, YTD Units Issued, and YTD Units Received when Issues or Receipts are performed without having to perform a Balance Recalculation process each time.
Scheduling	Multiday Scheduling	Provide a method to view the number of hours Scheduled and Unassigned and the hours assigned to individual workers. This would help verify that individuals have been scheduled for 40 hours.
Scheduling	Multiday Scheduling	Allow Deletion of a Scheduled Step from the current week's schedule. Allow a 'Deleted' Scheduled Step to be re-added to the same Day. This allows us to change our mind when scheduling and resources or equipment come available after we had determined we could not perform the work and 'deleted' the WO Step from the schedule.

V12.02 to V13 Update Summary

Module	Object	Description
Scheduling	Multiday Scheduling	Scheduling a WO Step was always setting the Step State to Scheduled. This should only happen if the current Step State is less than Scheduled.
PM	Meter Reading	When entering a new Meter Reading the cursor should be automatically positioned in the Reading field.
Equipment	Equipment Copy/Move	Allow Equipment and their related maintenance records to be moved or copied to another Maintenance Location.
Work Order	Work Request	Make the Work Request 'Duplicate Requests Exist for the same Equipment' warning message an Application Option that can be turned on or off.
Work Order	Work Order Edit	Modifying the WO Asset Id will ask if this Asset should be made the Primary Asset on the related Steps.
Mobile	Equipment, Work Order, Inventory data	Display CHAMPS EAM Windows Equipment, Work Order and Inventory on Mobile devices.
